About Airport Codes

Airport Codes is a new series of products that allows you to collect airports from all over the world. The brand new format of the products will be ideal for spotter photography and for displaying models on shelves.

The layout has been adapted to match the background as closely as possible. Depending on the set, it represents a section of runway, taxiway or stands. At each scale, the set has a different format and always accommodates min. 1 aircraft model of your choice.

Real photo of the airport, which will allow you to present your models perfectly and take spotters' photos as if you were at the real airport. The photo is printed on high quality satin paper which, together with daylight, captures the real view perfectly. Depending on the scale, the background board has a different height.

The base and background are connected by a special connector. The connection is made by magnet connector, which allows you to remove and easily store the set. The board itself contains a completely new base and allows various sets from the new series to be combined.

Contents of each set: layout board, background board, special connector with magnets. The finished board is 5-6 mm thick.
